

WTS Paradigm Structure Design

Two can walls will depict classic 'Mario' scene. In foreground out of cans will be the green tube and a Mario figure. Shown as 1 can width in depiction, will be closer to 3-4 can widths for Mario figure during build.

Decanstruction

- Structure is composed of canned goods. Entire structure is free standing, no tape is currently planned for use. The layers of canned goods are separated by thin plywood.
- The team wishes to save the plywood
- We still have to find volunteers who can help with decanstrution
- Structure can be disassembled from top to bottom without any special considerations.
